

Other LOR users have created utilities that interact with LOR and provide additional features. These applications were not written by Light-O-Rama. These applications are not hosted on the LORWiki, nor can the LORWiki or Light-O-Rama provide any support for them. Links to the applications and a description of them are posted here so that all users can locate these helpful utilities.

## **LOR Power Utility**

Here how what Tom, of T2Lights.com describes his utility.

The LOR power usage utility is an Excel spreadsheet that can create a graph of current use versus time for a given Light-O-Rama v2 sequence. It can be used to aid in designing your layout and sequencing your lights to avoid the possibility of drawing too much current from a given controller or power feed circuit.

This utility is located on Tom's web site, [T2Lights.com](http://T2Lights.com).

## **Chuck-O-Rama**

Written by Chuck Hutchings, this utility was created for LOR1. It's purpose was to help you print out your channel configuration.

You can find this utility on Chuck's site, [ChucksCorner.com](http://ChucksCorner.com) Â
