

If you are running an animation sequence (no music), you can run the controllers in Stand-Alone mode, where you download the sequences to your controllers ahead of time. The sequences will then run when instructed, based on previously defined parameters. Stand-alone mode can only be used for animation. You can not integrate music into a display in stand-alone mode of a standard controller.

If you are running a musical show, you have two options. You can keep a computer connected to the LOR network to run the show, or you can use a "Director Card with MP3 Player". The Director card will store the shows and music files, and control the LOR controllers on the network.
