So you want to add video to you display - the great all mighty future frontier of digital Christmas displays. Currently LOR2 supports video in any format that Windows Media Player supports. To do video, it is as easy as selecting a video file versus a music file for a Musical Sequence.

Step by Step

1. Open   LOR Sequence Editor
2. File   > New > Musical Sequence
3. Select   your video File.
4. Fill   in your Sequence Author and your Timing Configuration.
5. Sequence   Channels as normal.

When playing your sequence your video will play and display on your monitor you have selected in configuration.
