

### Configuration

***Edit “ Preferences “ Video Preferences***

### Display Video

This setting is just like the Control Lights setting. This will display the video on the selected monitor.

### Display Audio Visualizations

Well in my Demo™s I couldn™t tell what this did. Maybe LOR can provide some insight.

### Use Full Screen Mode

This will force your video to full screen mode (Hence the name). TIP: Use a video in the same resolution as your monitor / projector for the sharpest results.

### Select Monitor

This allows you to select the monitor on which the video will play. This is most important in multi monitor setups.
