What else can I do while a show is playing?

You can remove sequences from a show without making the show restart by moving the sequence files to be removed into a different directory. Â When the show tries to play that sequence, it won't be able to load it, so it will just go on to the next sequence. Â You can also just delete the sequence file if you have a backup or don't want it anymore. Â Again, this won't work for a background sequence, which is only loaded once when the show starts.
