

The Light-O-Rama software package is governed by three main sections, Sequences, Shows and Schedules. Each of these functions plays an important part within the Light-O-Rama system.

A sequence is file that contains instructions for the Light-O-Rama controllers to follow.

A show is a collection of sequences. The Show Editor is used to create shows based on the sequences you have created.

A schedule is what controls when your shows are run. The scheduled editor is used to create the shows when running via your PC. The Hardware Utility is used to create shows that will be run with the MP3 Director.
