You can have Light-O-Rama automatically start when your PC is started. This is helpful when you have shows scheduled and want to make sure that Light-O-Rama will start the show on schedule. If you do not have Launch at startup set and there PC should reboot for any reason, your scheduled shows will not run until you manually start the Light-O-Rama Control Panel. Use Launch at Startup and the Do not launch at startup options to enable and disable automatic startup of Light-O-Rama.
