

In order to have LOR start up and begin the shows after a reboot or power failure, you must do the following.

- The Control Panel **must** be running at all times.
- The "Enable Shows" option must be enabled at all times.
- The "Launch at Startup" option must be enabled at all times.

If any of these three conditions are not met, then LOR will not re-enable shows when the computer is restarted. If you want to run the sequence editor with the shows enabled, you will need to turn off "Play Lights" within the Sequence Editor. Otherwise, you will run into a com port conflict.
