

Problem: You've created your sequences, and they run in the sequence editor. You created a show, then created a schedule. You've enabled the shows, and the LOR Control Panel says the shows are enabled.

Yet, you have no lights.

Here is a checklist of things to verify.

- Did you move the sequences to a new computer? If so, verify that the sequence will play in the sequence editor. When changing computers, the path names do not always stay the same
- Did you verify that your channel configuration was correct?
- Did you configure your channels correctly? ([See this thread on the forums for more information](#) .)
